Learning Objectives:
- Explain the goals and benefits of pulmonary rehabilitation (PR).
- Select patients for PR.
- Assess patients for PR.
- Develop education for PR.
- Recommend and implement strategies for management of dyspnea.

Definitions, Goals & Benefits

Definition
- Rehabilitation - restoration of an individual to the fullest medical, mental, emotional, social and vocational potential of which he or she is capable.
- Rehabilitation - NOT a cure

FYI - click for AARC rehabilitation CPG
http://www.rcjournal.com/cpgs/prcpg.htm

FYI - click for ACCP evidence-based rehabilitation CPG

Definition (cont’d)
- Integrated into the individualized treatment of the patient, pulmonary rehabilitation is designed to reduce symptoms, optimize functional status, increase participation and reduce health care costs through stabilizing or reversing systemic manifestations of the disease. (ATS, ERS 2006)

FYI - link to AARC Continuing Care and Rehabilitation Section
http://www.aarc.org/sections/ccr/index.asp
Definition components

- **Multidisciplinary:** Programs utilize expertise from various healthcare disciplines that is integrated into a comprehensive, cohesive program tailored to the needs of each patient.

Definition components

- **Individual:** Patients with disabling lung disease require individual assessment of needs, individual attention, and a program designed to meet realistic individual goals.

Definition components

- **Attention to physical and social function:** To be successful, pulmonary rehabilitation pays attention to psychological, emotional, and social problems as well as physical disability, and helps to optimize medical therapy to improve lung function and exercise tolerance.

Goals

- Reduce symptoms
- Optimize functional status
- Increase participation (patient)
- Reduce health care costs

Costs of COPD

- COPD will cost $176.6 billion in the U.S.A. over the next five years, and $389.2 billion over the next 10 years.
- COPD is the fourth leading cause of death in America, claiming the lives of 120,000 Americans in 2002.
- An estimated 10.7 million U.S.A. adults have COPD, but there may be many more undiagnosed cases.

FYI - Click to see article on COPD costs http://www.medicalnewstoday.com/articles/44235.php

Benefits of rehabilitation (COPD)*

- Cost-effectiveness
- Reduces utilization of healthcare services; e.g., hospitalizations
- Reduces dyspnea
- Improves health related quality-of-life (HRQoL)
- Psychosocial improvement; e.g., reduces depression
- May benefit patients with other pulmonary conditions

*6-12 week rehabilitation program

| Patient Selection & Assessment |
Conditions managed

- Restrictive diseases
  - Interstitial lung disease; e.g., fibrosis, occupational lung diseases
  - Chest wall diseases; e.g., kyphoscoliosis

- Neuromuscular diseases; e.g., post-polio syndrome, ALS

- Other conditions
  - Lung cancer
  - Pulmonary hypertension
  - Pre-post lung transplantation, lung volume reduction surgery

Patient selection

- Patients with chronic respiratory impairment who, despite optimal medical management, have:
  - Dyspnea,
  - Reduced exercise tolerance, or
  - Restricted activities of daily life (ADL)
  - Peripheral muscle weakness

- Patients with chronic respiratory impairment who, despite optimal medical management, have:
  - Dyspnea,
  - Reduced exercise tolerance, or
  - Restricted activities of daily life (ADL)
  - Peripheral muscle weakness
  - Impaired physical activity
  - Impaired occupational performance
  - Impaired ADL

Patient selection

- Pulmonary lab data
  - FEV1 < 80% pred
  - FEV1/FVC < 70% pred
  - DLCO < 65% pred
  - Resting SPO2 < 90%
  - Exercise SPO2 < 90%

- Conditions that impede cooperation with rehabilitation interventions:
  - Orthopedic impairment
  - Psychiatric impairment
  - Neurologic impairment

- Unstable cardiac disease

- Severe pulmonary hypertension

- Active smoking - controversy, whether cessation is a prerequisite or goal

Exclusion criteria
Patient assessment

Initial interview
- explain rehabilitation process
- establish patient's goals
- establish trust & credibility

Medical history & physical examination

Symptoms
- dyspnea - later section
- cough
- sputum production
- chest pain
- weakness, fatigue
- loss of appetite
- sleep disturbances

Exercise testing
- medical status must be optimized before exercise testing
- intended to establish baseline measurements
- tests
  - 6 minute walk test (6MWT)
  - cardiopulmonary exercise testing (CPET) - more objective measures

Activities of daily living (ADL)
- activity categories
  - mobility; e.g., walking, stair-climbing
  - domestic work; e.g., cooking, lifting
  - personal hygiene; e.g., bathing
  - leisure activities
  - sexual activity

Nutritional status
- important predictor of mortality
- weight gain is associated with decreased mortality
- parameters
  - weight loss/gain
  - albumin levels
  - free fat mass

Activities of daily living (ADL)
- measurement methods
  - structured interview
  - questionnaire
  - on-site video recording
  - motion detectors
  - activity monitors; e.g., pedometer

Click for article with ADL questionnaire
http://ageing.oxfordjournals.org/content/31/5/355.full.pdf+html

FYI - click for article on COPD and sex
http://www.webmd.com/lung/copd/features/copd-sex
**Patient assessment**

- **Education** - the core of rehabilitation
  - **rationale** - to determine individual content and instructional methods
  - **parameters**
    - reasoning skills
    - literacy
    - current knowledge of disease and management
    - sensory acuity - vision & hearing
    - language/cultural barriers
    - technical skills; e.g., computer literacy

**Psychosocial**

- **parameters**
  - perception of disease
  - perception of quality-of-life (QOL)
  - self-efficacy
  - motivation
  - substance abuse
  - psychological impairment
  - marital relations

**Goals:**

- Improve health behaviors.
- Encourage physical fitness.
- Improve the patient's quality of life.
- Increase the patient's ability to cope with their condition
- Reduce hospital admissions and length-of-stay (LOS)
- Optimize nutritional status.

FYI - Click to download St. George Manual & questionnaire
http://www.healthstatus.sgu.ac.uk/sgrq-downloads/sgrq-c-downloads/
Special considerations

- Adult learners
- Variable entry-level knowledge and physical capabilities
- Hypoxemia impairs memory
- Variable learning skills
- Variable learning styles/preferences
- Variable endpoint capabilities
- Family member(s) may be integrated into program

Implications

- Relevance of instruction must be clear
- Objectives must be clear
- Frequent repetition & reinforcement may be necessary (patience)
- Patient should be active participant

Entry level skills assessment

- Reasoning skills
- Comprehension of disease and management
- Literacy
- Sensory acuity - vision & hearing
- Language/cultural barriers
- Technical skills; e.g., computer literacy

Instructional topics

- Lung function with COPD
- Medications - purposes, effects, side effects, self-administration
- Breathing techniques
- Physical exercise

Instructional topics

- Lung function with COPD
- Medications - purposes, effects, side effects, self-administration
- Breathing techniques
- Physical exercise
- Healthy eating
- Recognizing and managing exacerbations
- Coping with disease; i.e., managing depression, anxiety and panic attacks.

FYI - Click to download principles of adult education
http://www.kyeemafoundation.org/content/userFiles/file/extension/Adult_education.pdf

Click for video on adult education (2.6 min)

Click to see/download educational assessment example
http://www.st-lukes.org/uploadedFiles/Patients/Outpatient_Admission_Forms/Educational%20Assessment.pdf
**Instructional topics**
- Oxygen therapy
- Smoking cessation
- Sputum clearance
- Energy conservation techniques
- Sexuality issues
- Community resources, legal issues and palliative care

**Instructional methods**
- Lesson plan is imperative
- Lesson plan stages
  I. Preparation (of learner)
  II. Presentation or demonstration
  III. Application
  IV. Verification
  V. Summary & review

**Instructional strategies**
- Live lecture/demonstration
- Distance learning; e.g., web-based instruction
- Guided practice
- Printed media
- Electronic media
- Group discussions
- Simulations/games

**Assessment of learning**
- Need to confirm enabling objectives before proceeding
- Formal or informal
- Methods
  - conversation
  - oral questioning
  - written examination
  - learner demonstration - motor skills
  - group discussion
  - scenarios/simulation

**Dyspnea definition (ATS)**
"Dyspnea is a term used to characterize a subjective experience of breathing discomfort that is comprised of qualitatively distinct sensations that vary in intensity. The experience derives from interactions among multiple physiological, psychological, social, and environmental factors, and may induce secondary physiological and behavioral responses."
Importance of dyspnea

- Dyspnea warns individuals of risk that ventilation may be inadequate.
- Presents limitations to physical activity that result in muscular atrophy, anorexia, general debilitation

Mechanisms for dyspnea

- Multidimensional sensation
  - physiological factors
  - psychological factors
- Qualitative categories (sensations)
  - air hunger; e.g., congestive heart failure
  - excessive effort; e.g., COPD, interstitial lung disease
  - chest tightness; e.g., asthma

FYI - click to download article on dyspnea mechanisms and treatment

Mechanisms for dyspnea

- Stimuli
  - increased demand for ventilation; e.g., hypoxia, exercise
  - increased impedance and effort required to ventilate; e.g., bronchoconstriction
  - altered perception of dyspnea; e.g., anxiety

Mechanisms for dyspnea

- Sensors
  - metaboreceptors - skeletal muscles
  - central & peripheral chemoreceptors
  - facial, upper airway vagal receptors
  - parenchymal vagal receptors
    - slowly adapting stretch receptors
    - rapidly adapting stretch receptors
  - C fiber receptors (AKA J receptors)
  - chest wall receptors

Mechanisms for dyspnea

- Brain areas activated by dyspnea signals are also activated by other unpleasant sensations; e.g., pain
- Brain signals to:
  - motor cortex - ventilatory muscle activation
  - sensory cortex - conscious awareness of breathing effort

Assessment of dyspnea

- Respiratory distress - the degree to which the symptom bothers the patient
- Problem: Discrepancies between intensity of dyspnea and severity of disease exist, due to:
  - affect; e.g., stoicism, emotions
  - metabolic cost of exercise; e.g., due to weight, deconditioning
Assessment of dyspnea

- **Unidimensional instruments - real-time dyspnea during exercise**
  - Modified Borg scale
  - Modified medical research council (MMRC) dyspnea scale
  - Visual analog dyspnea scale

Click to see/download Borg dyspnea scale
http://www.cdc.gov/physicalactivity/everyone/measuring/exertion.html
Click to see MMRC dyspnea scale
http://copd.about.com/od/copdbasics/a/MMRCDyspneascale.htm
Click to see visual analog dyspnea scale
http://www.jornaldepneumologia.com.br/imagebank/2034_figure1.gif

Assessment of dyspnea

- **Multidimensional instruments**
  - greater validity & reliability
  - interview regarding recalled dyspnea during activities
  - measure functional impairment and magnitude of effort

Assessment of dyspnea

- **Baseline/transitional dyspnea index (BDI/TDI)**
- UCSD shortness of breath and pulmonary functional status and shortness of breath questionnaire

FYI - Click for information on BDI/TDI questionnaire
Click for UCSD SOB questionnaire
http://www.samc.com/documents/Pulmonary_Rehab/PulmonaryRehab_BreathlessnessQues.pdf

Assessment of dyspnea

- **Considerations**
  - instrument validity & reliability
  - terminology used
  - time to complete
  - established minimally clinically important differences
  - cost of instrument - generic ones are free

FYI - click for article on minimally clinical importance
http://erj.ersjournals.com/content/19/3/390.full.pdf+html

Treatment of dyspnea

- **Strategy categories**
  - Reduce sense of effort & improve ventilatory muscle function
  - Decrease ventilatory drive
  - Alter central perception
  - Exercise training

Treatment of dyspnea

- **Reducing sense of effort & improve ventilatory muscle function**
  - energy conservation - self-pacing, eliminating unnecessary tasks
  - decreasing dyspnea during sex - O2, timing before meals, positioning, etc.
Treatment of dyspnea

- Reducing sense of effort & improve ventilatory muscle function
  - breathing strategies
    - pursed lip breathing
    - abdominal (diaphragmatic) breathing
    - efficient breathing pattern - slow and deep for obstructive disease
  - positioning - postural support of breathing
  - nutrition & eating
    - meal planning for appropriate weight
    - low carbohydrate
    - O2 during meals
    - smaller portions, greater frequency

Click for descriptions of postural support
http://www.copdsupport.ie/copd-support-group/901-2/dyspnea-positions

Click for video on diaphragmatic breathing (4.3 min)
http://www.youtube.com/watch?v=C_4E_QoDRSQ

Click for video on pursed lip breathing (3.5 min)
http://www.youtube.com/watch?v=0p5Ree95H7E

Treatment of dyspnea

- Reducing sense of effort & improve ventilatory muscle function
  - inspiratory muscle training - conditions muscles for greater efficiency
  - bronchodilator therapy - decreases ventilatory impedance
  - heliox
  - lung volume reduction surgery - decreases hyperinflation

FYI - click for article on heliox and COPD
http://err.ersjournals.com/content/19/115/30.full

Treatment of dyspnea

- Decrease ventilatory drive
  - oxygen therapy
  - CNS medications
    - opiates and sedatives
    - anxiolytics; e.g., benzodiazepines
    - antidepressants

FYI - Click for article on furosemide and dyspnea

Treatment of dyspnea

- Decrease afferent stimuli from peripheral receptors
  - chest wall vibration in phase with inspiration
  - fans - cool air to face stimulates vagal receptors
  - inhaled opiates - terminal phase
  - inhaled furosemide - action uncertain, for exertional dyspnea, cancer

FYI - Click for article on furosemide and dyspnea

Treatment of dyspnea

- Alter central perception
  - education
    - dyspnea management
    - relaxation techniques
    - breathing re-training
    - panic control

FYI - Click for article on a dyspnea self-management program
Treatment of dyspnea

- Alter central perception
  - biofeedback
    - patient monitors physiologic data
    - patient adjusts breathing in response to biofeedback
  - music
    - distraction from perceived ventilatory effort
    - lacks evidence

- Exercise training - critical to dyspnea management
  - benefits
    - enhances strength and efficiency of peripheral muscles
    - increases self-efficacy (can do!)
  - exercises
    - upper and lower body
    - yoga, tai chi, break dancing

FYI - click to see break dance
http://www.youtube.com/watch?v=Rg887SYsLxE&feature=related

Summary & Review

- Definition - restoration to maximum function
- Goals - reduce symptoms, optimize function, increase participation, reduce costs
- Benefits; e.g., cost effectiveness, improved HRQoL
- Rehabilitation sites
- Rehabilitation team
- Required components

Patient selection

- Conditions: COPD; asthma; restrictive diseases AND
dyspnea, impaired ADL, etc.
- PFT data; e.g., FEV<sub>1</sub> < 80%
- Exclusionary criteria - orthopedic, psychiatric impairment

Patient assessment

- symptoms
- exercise testing - 6 MWT, vs. CPET
- ADLs - categories, measurement methods
- nutritional status; e.g., weight loss
- education - parameters, methods
- psychosocial parameters, methods
Summary & Review

Education - critical component
◆ goals - improve behaviors, fitness, etc.
◆ considerations - adult learners
◆ entry-level assessment
◆ instructional topics; e.g., disease, drugs, exercises
◆ instructional methods - lesson planning
◆ instructional strategies
◆ assessment of learning

Dyspnea assessment & management
◆ definition - subjective, breathing discomfort
◆ importance - warning
◆ mechanisms - multidimensional
◆ assessment - unidimensional vs. multidimensional instruments

Dyspnea management strategies
◆ reduce effort & improve ventilatory muscle function
◆ decrease ventilatory drive
◆ alter central perception
◆ exercise training
